

COVER LETTER

Submission type: Original Research Article

Dear Editorial Team,

Please consider our manuscript, “PLaND - Path to Least Non Determinism,” for publication as an Original Research Article in the Scholars Journal of Engineering and Technology.

The manuscript presents PLaND as an evaluation-driven methodology for moving stable workflow steps from natural language into tested deterministic implementations while retaining language-model judgment where evidence requires it. A three-seed paired study provides direct run-to-run evidence: LEDGAR is the repeated positive case, while CFPB and SpamAssassin preserve rejection and safety evidence under the same frozen gate structure.

The complete experiment evidence, manifests, exact commands, case-level outputs, and reproducibility metadata are preserved in the same Git commit as this manuscript, on branch codex/pland-variance-study. An arXiv-ready source bundle has been prepared locally but has not been uploaded or submitted; no arXiv identifier exists.

Both authors are affiliated as Independent Researcher, San Francisco, CA, USA. The work received no external funding. The authors declare no conflicts of interest, no acknowledgements, and no ORCID identifiers.

Thank you for your consideration.

Sincerely,

Maddipatla Naga Venkata Sai Krishna
